Buying a new home is an important decision. So, we urge you to look carefully. Compare our homes to others in any price range. We think you'll agree that a Jacobsen Home is the finest, most affordable value anywhere.

A handwritten signature in black ink that reads "Bob Jacobsen". The signature is written in a cursive, flowing style.

A Family Tradition of Quality since 1959

From its founding in 1959, the Jacobsen Homes has maintained a first-class reputation for quality. People say there is a uniqueness about a Jacobsen Home that no other builder has matched. The reason is, no other builder has so successfully merged state-of-the-art engineering with the all-important human touch.

This is most evident in Jacobsen Homes' widely recognized leadership in flexibility. Flexibility that provides each and every Jacobsen Home customer the opportunity to put their own personal touches into their home. Jacobsen Homes takes pride in the fact that their excellent technology and skills allow them to be as flexible as their customers' ideas. All this at an affordable price.

Some buyers prefer to select from over 80 popular, professionally-designed floor plans available, while others choose to design their dream home themselves. At Jacobsen Homes you select your own level of involvement.

Our new 2007 homes are standard with knockdown ceiling and ceramic tile or laminate floors in the kitchen, laundry room, and some bath areas. Elegant cabinetry features drawer-over-door in the kitchen, and 36" high residential bath cabinets. A wide variety of options are available, such as painted, textured drywall with painted wood door and baseboard molding, rounded corners, columns, Corian and granite countertops, fireplaces, reverse vaulted ceilings, plantation-style interior wood window shutters, factory-built porches, high roof pitches, and Craneboard siding.

Jacobsen Homes is one of the few manufacturers who build to HUD's strictest codes: Wind Zone Three and Exposure "D". Recent hurricanes proved that the new building codes worked. **No Jacobsen Home built after the new codes came into effect in 1994 had any major structural damage caused by the storms.**
